

# Evan Takeo Kanaiaupuni Greer

FULL STACK WEB DEVELOPER

## Profile

Mechanical engineer turned ambitious full stack web developer. With a background in design and project management, I complete tasks under pressure, meet deadlines, and deliver meaningful solutions. Through project experiences using Ruby on Rails, JavaScript, React, RESTful APIs, HTML, and CSS, I have developed a zeal for discovering new ways of connecting people, sharing ideas, and advancing culture through modern web development.

## Selected Technical Projects

### MariPilot Website, Denver, Colorado

JULY 2020

Full stack web application for MariPilot. The user interface allows for users to use a business planning tool and communicate using a messaging board to connect with other users. Users will be allowed to add channels. The user interface is built in React and the backend is written in Ruby on Rails. The user information and messages are stored in a PostgreSQL relational database. JWT authentication is used for user login. An administration login is created for the moderation and management of the messaging board. The admin will be allowed to pin announcements and send emails to users.

### Rave Mom Phaser Game, Denver, Colorado

APRIL 2020

Personalized browser based game built in the Phaser 3 JavaScript library. Rave Mom is a one player survival game with a scoring system that is a variation on the classic Bomberman game. The back end is written in Ruby on Rails. The user's information and scores are stored in a PostgreSQL relational database. JWT authentication is used for the user login. The game is deployed on Google Firebase and Heroku.
